

CE EMC Test Report

Issued date: May 12, 2025

Project No.: 25Q021403

Product : Expandable AI Computing System

Model : TGS-1000

Series Model : TGS-1XXXXXXXXXXXXX ("X" can be 0-9, A-Z or blank)

Applicant : Vecow Co., Ltd

Address : 3F, No. 10, Jiankang Rd., Zhonghe Dist., New Taipei City 23586, Taiwan

Report No: WD-EE-R-250153-B0

According to

EN 50121-1: 2017

EN 50121-3-2: 2016 + A1: 2019

EN 50155: 2021, Clause 13.4.9

EN 61000-3-2: 2014, Class A

EN IEC 61000-3-2: 2019 + A2: 2024, Class A

EN 61000-3-3: 2013 + A2: 2021 + AC: 2022

EN 61000-4-2: 2009

EN IEC 61000-4-3: 2020

EN 61000-4-4: 2012

EN 61000-4-5: 2014 + A1: 2017

EN IEC 61000-4-6: 2023

Authorized Signatory :  / Ken Huang

Wendell Industrial Co., Ltd
Wendell EMC & RF Laboratory

Add: 5F-1, No. 188, Baoqiao Road, Xindian District, New Taipei City 23145, Taiwan R.O.C.

1 Certification

Product: Expandable AI Computing System
Brand Name: Vecow
Model: TGS-1000
Series Model: TGS-1XXXXXXXXXXXX ("X" can be 0-9, A-Z or blank)
Applicant: Vecow Co., Ltd
Tested: Apr. 18 ~ May 05, 2025
Standard: EN 50121-1: 2017
EN 50121-3-2: 2016 + A1: 2019
EN 50155: 2021, Clause 13.4.9
EN 61000-3-2: 2014, Class A
EN IEC 61000-3-2: 2019 + A2: 2024, Class A
EN 61000-3-3: 2013 + A2: 2021 + AC: 2022
EN 61000-4-2: 2009
EN IEC 61000-4-3: 2020
EN 61000-4-4: 2012
EN 61000-4-5: 2014 + A1: 2017
EN IEC 61000-4-6: 2023

The above equipment (Model: TGS-1000) has been tested by **Wendell EMC & RF Laboratory**, and found compliance with the requirement of the above standards. The test record, data evaluation and Equipment Under Test (EUT) configurations represented herein are true and accurate accounts of the measurements of the sample's EMC characteristics under the conditions specified in this report.

Please note that the measurement uncertainty are provided for informational purpose only and are not used in determining the Pass/Fail results.

1.1 Summary of Result

The EUT has been tested according to the following specifications:

| Emission | | | |
|------------------|--|--------|------------------------|
| Basic Standard | Test Item | Result | Remark |
| EN 55016-2-1 | Conducted disturbance at mains power ports | Pass | Meets the requirements |
| EN IEC 61000-6-4 | Radiated disturbance | Pass | Meets the requirements |
| EN IEC 61000-3-2 | Harmonic current emission | Pass | Meets the requirements |
| EN 61000-3-3 | Voltage fluctuations and flicker | Pass | Meets the requirements |

| Immunity | | | |
|------------------|---|--------|---|
| Basic Standard | Test Item | Result | Remark |
| EN 61000-4-2 | Electrostatic discharge | Pass | Meets the requirements of Performance Criterion A |
| EN IEC 61000-4-3 | Radiated, radio-frequency electromagnetic field | Pass | Meets the requirements of Performance Criterion A |
| EN 61000-4-4 | Electrical fast transient / burst | Pass | Meets the requirements of Performance Criterion A |
| EN 61000-4-5 | Surge | Pass | Meets the requirements of Performance Criterion A |
| EN IEC 61000-4-6 | Conducted disturbances | Pass | Meets the requirements of Performance Criterion A |

Note: Test record contained in the referenced test report relate only to the EUT sample and test item.

2 Laboratory Information

2.1 Measurement / Test Facility

Conducted disturbance at main power port, Conducted disturbance at telecommunication port, Harmonics, Flicker, ESD, EFT, Surge, CS, PFMF, DIP and Close Proximity Radiated fields test

W01: 5F-1, No.188, Baoqiao Rd., Xindian Dist., New Taipei City 23145, Taiwan (R.O.C)

RS, ESD and Surge test

W05: 1F-7, No.188, Baoqiao Rd., Xindian Dist., New Taipei City 23145, Taiwan (R.O.C)

Conducted disturbance at main power port, Conducted disturbance at telecommunication port, Radiated disturbance (9*6*6 Chamber) and ESD test

W08: No.119, Wugong 3rd Rd., Wugu Dist., New Taipei City 248, Taiwan (R.O.C)

ACCREDITATIONS

The laboratories are accredited and approved by the TAF according to ISO/IEC 17025.

2.2 Measurement Uncertainty

The measurement instrumentation uncertainty is evaluated according to CISPR 16-4-2.

This uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of $k=2$.

Wendell EMC & RF Laboratory U_{lab} is less than U_{cispr} , therefore compliance or non-compliance with a disturbance limit shall be determined in the following manner.

- compliance is deemed to occur if no measured disturbance level exceeds the disturbance limit;
- non-compliance is deemed to occur if any measured disturbance level exceeds the disturbance limit.

Please note that the measurement uncertainty (U_{lab}) is provided for informational purpose only and is not used in determining the Pass/Fail results.

2.2.1 Conducted Emission Measurement

| Test Site | Frequency Range | dB (U_{lab}) | Note |
|-----------|------------------|------------------|------|
| W01-CE | 150 kHz ~ 30 MHz | 2.84 | LISN |
| W08-CE | 150 kHz ~ 30 MHz | 2.72 | LISN |

2.2.2 Radiated Emission Measurement

| Test Site | Frequency Range | Ant | dB (U_{lab}) | Note |
|-----------|--------------------|-----|------------------|------|
| W08-966-1 | 30 MHz ~ 200 MHz | V | 3.50 | N/A |
| | 30 MHz ~ 200 MHz | H | 2.96 | N/A |
| | 200 MHz ~ 1000 MHz | V | 5.09 | N/A |
| | 200 MHz ~ 1000 MHz | H | 3.41 | N/A |
| | 1 GHz ~ 6 GHz | V | 4.37 | N/A |
| | 1 GHz ~ 6 GHz | H | 4.30 | N/A |

3 General Information

3.1 Description of Equipment Under Test

| | |
|----------------------------|--|
| Product | Expandable AI Computing System |
| Brand | Vecow |
| Model | TGS-1000 |
| Series Model | TGS-1XXXXXXXXXXXXX ("X" can be 0-9, A-Z or blank) |
| Applicant | Vecow Co., Ltd |
| Received Date | Feb. 27, 2025 |
| EUT Power Rating | 24Vdc (from adapter) |
| Model Differences | The models are electrically identical, different models no. are for marketing purpose. The series model information is provided by client. |
| Operating System | Windows 11 Pro version: 23H2 |
| Data Cable Supplied | N/A |
| Accessory Device | N/A |
| I/O Port | Please refer to the User's Manual |

Note:

- The EUT uses the follow adapter:

| Adapter (support unit only) | |
|-----------------------------|--|
| Brand | LITEON |
| Model | PA-1331-92E |
| Input Power | 100-240Vac, 4.4A, 50-60Hz |
| Output Power | 24.0Vdc, 13.75A |
| Power line | Input: 1.8m non-shielded cable Output: 1.4m non-shielded cable with 2 cores |

- The EUT contains following components.

| Item | Brand | Model | Spec. | Qty. |
|------------|-----------|-------------------------------------|---------------------------|------|
| Main Board | - | TGS-1000 | Rev. B | 1 |
| CPU | Intel | Intel® Core™ Ultra 7 processor 165H | up to 5.00 GHz | 1 |
| RAM | innodisk | M5S0-GGMZO5ZQ | 48GB DDR5 5600 W/T SODIMM | 2 |
| M.2 SSD | innodisk | DEM24-C12DD1KWCQF | M.2 (P42) 3TE6 512GB | 1 |
| | Transcend | TS2TMTE712A-I | 2TB | 1 |
| GPU Board | NVIDIA | RTX 5000 Ada | - | 1 |

- The EUT's highest operating frequency is 1000MHz. Therefore the radiated emission is tested up to 6GHz.

3.2 Description of Measurement / Test Modes

Test results are presented in the report as below.

| Test Mode | Measurement / Test Condition |
|---|------------------------------|
| Conducted Emission Measurement | |
| - | AC-DC Adapter mode |
| Radiated Emission 30MHz ~ 1GHz Measurement | |
| - | AC-DC Adapter mode |
| Radiated Emission above 1GHz Measurement | |
| - | AC-DC Adapter mode |
| Harmonic & Flicker Measurement | |
| - | AC-DC Adapter mode |
| Immunity Test | |
| - | AC-DC Adapter mode |

3.3 Description of Operating Condition

- a. Placed the EUT on the test table.
- b. Prepare PC to act as a communication partner and placed it outside of testing area.
- c. The EUT was connected to the PC with LAN cable.
- d. The communication partner sent data to EUT by command "ping" via LAN.
- e. The EUT read / write data with Internal SSD & External SSD.
- f. The EUT run test program "BurnIN.exe" to enable all functions.
- g. The EUT sent Color Bar ITU-R.BT471-1 signal to monitor and displayed on screen.
- h. The microphone sent voice signal to EUT.
- i. The EUT sent voice signal to earphone.

3.4 Description of Associated Equipment

The EUT has been conducted testing with other necessary accessories or support units.

| Item | Equipment | Brand | Model No. | Serial No. | FCC ID | Data Cable | Power Cable | Remark |
|------|----------------------------|-----------|----------------|----------------------------|-------------------|-------------------------------|-----------------------------|--------|
| 1 | Desktop PC | DELL | D19M | N/A | PPD-QCNF A335 | 15m CAT.6A shielded LAN cable | AC: 1.8m non-shielded cable | - |
| 2 | 4K Monitor | ASUS | XG27UCS | S5LMTF200 765 | FCC SDoC Approved | 1.7m shielded DP cable | AC: 1.8m non-shielded cable | - |
| 3 | 4K Monitor | ASUS | XG27UCS | S7LMT01195 4 | FCC SDoC Approved | 1.7m shielded DP cable | AC: 1.8m non-shielded cable | - |
| 4 | Keyboard | DELL | KB216t | CN-0W33XP -L0300 -7C1-15UP | FCC SDoC Approved | 1.5m non-shielded USB cable | N/A | - |
| 5 | Mouse | DELL | MS116 | CN-0DV0RH -L0300 -7C1-15UP | FCC SDoC Approved | 1.5m non-shielded USB cable | N/A | - |
| 6 | Earphone & Microphone | Avier | AEP-MM | N/A | N/A | 1.2m non-shielded Audio cable | N/A | - |
| 7 | External Portable SSD (x3) | Transcend | TS120GESD 240C | F96474-0001 | FCC SDoC Approved | 1m shielded USB cable | N/A | - |

- Note:**
1. The core(s) is(are) originally attached to the cable(s).
 2. Item 1 acted as communication partners to transfer data.

3.5 Configuration of Equipment Under Test

4 Emission Measurement

4.1 Conducted Emission Measurement

4.1.1 Limit of Conducted Emission Measurement

| Frequency (MHz) | Quasi-peak dB(μ V) |
|-----------------|-------------------------|
| 0.15 to 0.5 | 99 |
| 0.5 to 30 | 93 |

- Note:**
1. The lower limit shall apply at the transition frequencies.
 2. Detector function in the form: QP = Quasi Peak, AVG = Average
 3. The result calculated as following:
Measurement Value = Reading Level + Correct Factor
Correct Factor = LISN Factor + Cable Loss + Transient Limiter (If use)
Margin Level = Measurement Value – Limit Value

4.1.2 Measurement Instrument

| Test Site: W01-CE | | | | | |
|-------------------|--------------------------------|--------------|------------------------|------------|------------------------|
| Item | Equipment | Manufacturer | Model | Meter No. | Calibration Date |
| 1 | TWO-LINE V-NETWORK | R&S | ENV216 | CT-1-025-1 | Jun. 05, 2024 |
| 2 | Pulse limiter | R&S | ESH3-Z2 | CT-2-015 | Jun. 06, 2024 |
| 3 | EMI Test Receiver | R&S | ESCI | CT-1-024 | Jun. 06, 2024 |
| 4 | Artificial Mains Network (AMN) | SCHWARZBECK | NSLK 8127 | CT-1-104-1 | Jun. 06, 2024 |
| 5 | RF Cable | MVE | 200200.400LL .500A | CT-9-101 | Jun. 06, 2024 |
| 6 | 50ohm Termination | N/A | N/A | CT-1-065-1 | May 30, 2024 |
| 7 | Measurement Software | EZ-EMC | Ver: EMC-CON 3A1 | CT-3-012 | No calibration request |

Note: 1. The calibration interval of the above test instruments is 12 months.

| Test Site: W08-CE | | | | | |
|-------------------|--------------------------------|-----------------|------------------------|--------------|------------------------|
| Item | Equipment | Manufacturer | Model | Meter No. | Calibration Date |
| 1 | TWO-LINE V-NETWORK | R&S | ENV216 | CT-1-025-2 | Jun. 20, 2024 |
| 2 | RF Cable | EMCI | EMCCFD300-BM-BM-5000 | CT-1-107-2 | Jun. 24, 2024 |
| 3 | EMI Test Receiver | R&S | ESR3 | CT-1-103 | Jun. 20, 2024 |
| 4 | Artificial Mains Network (AMN) | SCHWARZBECK | NSLK 8127 RC | CT-1-104-1RC | Jun. 20, 2024 |
| 5 | Transient Limiter | Electro-Metrics | EM-7600 | CT-1-026 | Jun. 24, 2024 |
| 6 | 50ohm Termination | N/A | N/A | CT-1-109-1 | Jun. 20, 2024 |
| 7 | Measurement Software | EZ-EMC | Ver: EMC-CON 3A1 | CT-3-012 | No calibration request |

Note: 1. The calibration interval of the above test instruments is 12 months.

4.1.3 Measurement Procedure

- a. The table-top equipment under test was placed 0.8 meter height wooden table from the horizontal ground plane with EUT being connected to power source through a line impedance stabilization network (LISN). The floor-standing equipment under test was placed insulation support unit from the horizontal ground plane. The LISN at least be 0.8 meter from nearest chassis of equipment under test.
- b. The line impedance stabilization network (LISN) provides 50 ohm/50uH of coupling impedance for the measuring instrument. All associated equipment powered from additional LISN(s).
- c. Interrelating cables that hang closer than 0.4 meter to the ground plane shall be folded back and forth in the center forming a bundle. All I/O cables were positioned to simulate typical usage.
- d. The loads and/or devices simulating typical operating conditions shall be connected to at least one of each type of interface port of the equipment under test. If loading (or terminating) with a device of actual usage is not feasible, the port should be loaded with a simulator. Where these options are not practical the port shall be loaded by the application of a typical impedance considering both the common and differential modes.
- e. The EMI test receiver connected to the line impedance stabilization network (LISN) powering the equipment. The measurements shall be limited to the operating ranges of voltage and frequency as specified for the equipment under test, having regard to the supply voltage and frequency for the intended market of the equipment under test.
- f. The EMI test receiver scanned from 150kHz to 30MHz for emissions in each of modes. A scan was taken on both power lines, Line and Neutral, recording at least six highest emission amplitude.
- g. The equipment under test and cable configuration of the above highest emission amplitude were recorded.

4.1.4 Deviation from Standard

No deviation

4.1.5 Measurement Configuration

< Table-Top equipment under test >

< Floor-Standing equipment under test >

Note: Please refer to 4.1.7 for the actual test configuration.

4.1.6 Measurement Result

| | | | |
|--------------------------|--------------|-----------------|---------------|
| Test Voltage | 230Vac, 50Hz | Frequency Range | 0.15 ~ 30 MHz |
| Environmental Conditions | 24°C, 50% RH | 6dB Bandwidth | 9 kHz |
| Test Date | 2025/04/30 | Phase | L |
| Tested by | Andy Li | Test Site | W01-CE |

| No. | Frequency (MHz) | Reading Level (dB μ V) | Correct Factor (dB) | Measurement (dB μ V) | Limit (dB μ V) | Margin (dB) | Detector |
|-----|-----------------|----------------------------|---------------------|--------------------------|--------------------|-------------|----------|
| 1 | 0.1696 | 28.07 | 9.90 | 37.97 | 99.00 | -61.03 | QP |
| 2 | 0.1696 | 12.01 | 9.90 | 21.91 | 99.00 | -77.09 | AVG |
| 3 | 0.2505 | 28.04 | 9.89 | 37.93 | 99.00 | -61.07 | QP |
| 4 | 0.2505 | 17.08 | 9.89 | 26.97 | 99.00 | -72.03 | AVG |
| 5 | 0.3769 | 29.41 | 9.91 | 39.32 | 99.00 | -59.68 | QP |
| 6 | 0.3769 | 14.82 | 9.91 | 24.73 | 99.00 | -74.27 | AVG |
| 7 | 1.4824 | 24.87 | 9.95 | 34.82 | 93.00 | -58.18 | QP |
| 8 | 1.4824 | 12.02 | 9.95 | 21.97 | 93.00 | -71.03 | AVG |
| 9 | 5.4273 | 20.03 | 10.06 | 30.09 | 93.00 | -62.91 | QP |
| 10 | 5.4273 | 13.29 | 10.06 | 23.35 | 93.00 | -69.65 | AVG |
| 11 | 15.9261 | 21.07 | 10.23 | 31.30 | 93.00 | -61.70 | QP |
| 12 | 15.9261 | 11.79 | 10.23 | 22.02 | 93.00 | -70.98 | AVG |

Remark: 1. QP = Quasi Peak, AVG = Average
 2. Correct Factor = LISN Factor + Cable Loss + Transient Limiter (If use)
 3. Measurement Value = Reading Level + Correct Factor
 4. Margin Level = Measurement Value - Limit Value

| 8 | 1.3005 | 11.49 | 9.95 | 21.44 | 93.00 | -71.56 | AVG |
| 9 | 5.5347 | 25.47 | 10.07 | 35.54 | 93.00 | -57.46 | QP |
| 10 | 5.5347 | 18.15 | 10.07 | 28.22 | 93.00 | -64.78 | AVG |
| 11 | 16.8248 | 16.99 | 10.24 | 27.23 | 93.00 | -65.77 | QP |
| 12 | 16.8248 | 7.94 | 10.24 | 18.18 | 93.00 | -74.82 | AVG |

Remark: 1. QP = Quasi Peak, AVG = Average
 2. Correct Factor = LISN Factor + Cable Loss + Transient Limiter (If use)
 3. Measurement Value = Reading Level + Correct Factor
 4. Margin Level = Measurement Value – Limit Value

4.1.7 Photographs of Measurement Configuration

4.2 Radiated Emission Measurement

4.2.1 Limit of Radiated Emission Measurement

According to EN IEC 61000-6-4 table2 - Required highest frequency for radiated measurement:

| Highest internal frequency (F_x) | Highest measured frequency |
|--------------------------------------|---|
| $F_x \leq 108$ MHz | 1 GHz |
| $108 \text{ MHz} < F_x \leq 500$ MHz | 2 GHz |
| $500 \text{ MHz} < F_x \leq 1$ GHz | 5 GHz |
| $F_x > 1$ GHz | $5 \times F_x$ up to a maximum of 6 GHz |

Remark:

1. F_x : highest fundamental frequency generated or used within the EUT or highest frequency at which it operates.
2. Where F_x is unknown, the radiated emission measurements shall be performed up to 6 GHz.

Radiated Frequency range 30 MHz to 1000 MHz

| Frequency (MHz) | Quasi-peak dB(μ V/m) at 3m |
|-----------------|---------------------------------|
| 30 to 230 | 50 |
| 230 to 1000 | 57 |

Radiated Frequency range above 1 GHz

| Frequency (GHz) | Average dB(μ V/m) at 3m | Peak dB(μ V/m) at 3m |
|-----------------|------------------------------|---------------------------|
| 1 to 3 | 56 | 76 |
| 3 to 6 | 60 | 80 |

- Note:**
1. The lower limit shall apply at the transition frequency.
 2. Detector function in the form: PK = Peak, QP = Quasi Peak, AVG = Average
 3. The result calculated as following:
 Measurement Value = Reading Level + Correct Factor
 Correct Factor = Antenna Factor + Cable Loss (Antenna to Pre-Amplifier) -
 Pre-Amplifier Gain + Cable Loss (Pre-Amplifier to Receiver)
 Margin Level = Measurement Value - Limit Value

Note: 1. The calibration interval of the above test instruments is 12 months.

4.2.3 Measurement Procedure

- a. The table-top equipment under test was placed on the top of a turntable 0.8 meter above the ground at 3 m 966 chamber. The floor-standing equipment under test was placed insulation support unit from the horizontal ground plane. The turntable was rotated 360 degrees to determine the position of the highest radiation emissions.
- b. The height of the antenna shall vary between 1 m to 4 m. Both vertical and horizontal polarizations of the antenna were set to make the measurement.
- c. The loads and/or devices simulating typical operating conditions shall be connected to at least one of each type of interface port of the equipment under test. If loading (or terminating) with a device of actual usage is not feasible, the port should be loaded with a simulator. Where these options are not practical the port shall be loaded by the application of a typical impedance considering both the common and differential modes.
- d. The initial step in collecting radiated emission data is a spectrum mode scanning the measurement frequency range.

Below 1GHz:

Reading in which marked as QP means measurements by using receiver mode with detector setting in RBW = 120 kHz.

If the spectrum mode measured peak value compliance with and lower than QP Limit, the equipment under test shall be deemed to meet QP Limits.

Above 1GHz:

Reading in which marked as Peak & AVG means measurements by using spectrum mode with setting in RBW = 1 MHz.

If the spectrum mode measured value compliance with the Peak Limits and lower than AVG Limits, the equipment under test shall be deemed to meet both Peak and AVG Limits.

- e. Emission frequency and amplitude were recorded, recording at least six highest emissions. The equipment under test and cable configuration of the above highest emission amplitude were recorded.

4.2.4 Deviation from Standard

No deviation

4.2.5 Measurement Configuration

< Radiated Emissions Frequency: 30 MHz to 1000 MHz >

< Radiated Emissions Frequency: above 1GHz >

Note:

4.2.7 Photographs of Measurement Configuration

Frequency Range: 30 MHz ~ 1 GHz

Frequency Range: Above 1 GHz

4.3 Harmonic Current Measurement

4.3.1 Limit of Harmonic Current Measurement

| Limit for Class A equipment | |
|-----------------------------|---|
| Harmonic Order <i>n</i> | Max. permissible harmonics current A |
| Odd harmonic | |
| 3 | 2.30 |
| 5 | 1.14 |
| 7 | 0.77 |
| 9 | 0.40 |
| 11 | 0.33 |
| 13 | 0.21 |
| $15 \leq n \leq 39$ | $0.15*(15/n)$ |
| Even harmonic | |
| 2 | 1.08 |
| 4 | 0.43 |
| 6 | 0.30 |
| $8 \leq n \leq 40$ | $0.23*(8/n)$ |

| Limit for Class D equipment | | |
|-----------------------------|---|---|
| Harmonic Order <i>n</i> | Max. permissible harmonics current per watt mA/W | Max. permissible harmonics current A |
| Odd Harmonic only | | |
| 3 | 3.4 | 2.30 |
| 5 | 1.9 | 1.14 |
| 7 | 1.0 | 0.77 |
| 9 | 0.5 | 0.40 |
| 11 | 0.35 | 0.33 |
| 13 | 0.30 | 0.21 |
| $15 \leq n \leq 39$ | $3.85/n$ | $0.15*(15/n)$ |

- Note:** 1. Class A and Class D are classified according to item section 5 of EN IEC 61000-3-2.
 2. According to section 7 of EN IEC 61000-3-2, the above limits for all equipment except for Class B or C equipment and no limits apply for equipment with a rated power of 75W or less.

4.3.2 Measurement Instrument

| Item | Equipment | Manufacturer | Model | Meter No. | Calibration Date |
|------|-----------------------------|--------------|-------------|-------------|------------------|
| 1 | Harmonic & Flicker Analyzer | EMC PARTNER | HAR-1000-1P | CT-1-090(1) | Oct. 17, 2024 |
| 2 | Power Source | APC | AFV-P-5000B | CT-1-210 | Oct. 17, 2024 |

- Note:** 1. The calibration interval of the above test instruments is 12 months.

4.3.3 Measurement Procedure

The table-top equipment under test was placed on the top of a wooden table 0.8 meter above the ground and operated to produce the maximum harmonic under normal operating conditions for each successive harmonic component in turn. The floor-standing equipment under test was placed insulation support unit from the horizontal ground plane.

The classification of equipment is according to section 5 of EN IEC 61000-3-2.

The equipment is classified as follows:

Class A:

Equipment not specified as belonging to Class B, C or D shall be considered as Class A equipment.

Some example of Class A equipment are:

- Balanced three-phase equipment;
- Household appliances, excluding those specified as belonging to Class B, C or D;
- Vacuum cleaners;
- High pressure cleaners;
- Tools, excluding portable tools;
- Independent phase control dimmers;
- Audio equipment;
- Professional luminaires for stage lighting and studios.

Class B:

- Portable tools;
- Arc welding equipment which is not professional equipment.

Class C:

- Lighting equipment;
- Integrated lamps, integrated luminaires, non-integrated luminaires, separate lighting control gear;
- Lighting part of multi-function equipment where one the primary function of this is illumination;
- Ultraviolet (UV) and infrared (IR) radiation equipment;
- Illuminated advertising signs;
- Independent dimmers, other than phase control type, for lighting equipment;
- DLT control device.

Class D:

Equipment having a specified power less than or equal to 600W, of the following types:

- Personal computers and personal computer monitors;
- Television receivers;
- Refrigerators and freezers having one or more variable-speed drives to control compressor motor(s).

4.3.4 Deviation from Standard

Note:

1. Limits are not specified for equipment with a rated power of 75W or less.
2. According to EN IEC 61000-3-2 the manufacturer shall specify the power of the apparatus. This value shall be used for establishing limits. The specified power shall be within +/-10% of the measured power.

| 2 | Power Source | APC | AFV-P-5000B | CT-1-210 | Oct. 17, 2024 |

Note: 1. The calibration interval of the above test instruments is 12 months.

4.4.3 Measurement Procedure

The table-top equipment under test was placed on the top of a wooden table 0.8 meter above the ground and operated to produce the most unfavorable sequence of voltage changes under normal operating condition. The floor-standing equipment under test was placed insulation support unit from the horizontal ground plane.

During the flick measurement, the measure time shall include that part of whole operation cycle in which the EUT produce the most unfavorable sequence of voltage changes. The observation period for short-term flicker indicator is 10 min and the observation period for long-term flicker indicator is 2 hours.

5 Immunity Test

5.1 Standard Description

| Product standard | EN 50121-3-2 | |
|--|-----------------------|---|
| Basic Standard and Performance Criterion required | EN 61000-4-2 (ESD) | Contact discharge: ± 6 kV, Air discharge: ± 8 kV Performance Criterion B |
| | EN IEC 61000-4-3 (RS) | Field Strength: 20 V/m ^(Note1, 2) , 10 V/m, 5 V/m, 3 V/m Test Signal: 80% AM with 1 kHz sine wave Frequency Range: 80 M ~ 1000 MHz, 1400 MHz ~ 2000 MHz, 2000 MHz ~ 2700 MHz, 5100 MHz ~ 6000 MHz Performance Criterion A |
| | EN 61000-4-4 (EFT) | Power Port: ± 2 kV Signal / Control Port (cable length > 3m): ± 2 kV Performance Criterion A |
| | EN 61000-4-5 (Surge) | Power Port - Line to Line: ± 1 kV, 42 Ω , 0.5 μ F Line to Ground: ± 2 kV, 42 Ω , 0.5 μ F Performance Criteria B |
| | EN IEC 61000-4-6 (CS) | Voltage Level: 10V Test Signal: 80% AM with 1 kHz sine wave Frequency Range: 0.15 M ~ 80 MHz Applicable to port: Power Port, Signal / Control Port Performance Criterion A |

Note 1: This limit applies to equipment mounted in the passenger compartments, drivers cab or external to the rolling stock (roof, underframe). For equipment mounted in all other areas a severity level of 10V/m may be used.

Note 2: For large apparatus (e.g. traction drives, auxiliary converters) it is often not practical to perform the immunity test to radiated electromagnetic fields on the complete unit. In such cases the manufacturer should test susceptible sub-systems (e.g. control electronics). The test report should justify the selection or not of sub-systems and any assumptions made (e.g. reduction of field due to case shielding).

5.2 Performance Criteria

According to EN 50121-1 standard, the general performance criteria as following:

| | |
|-------------------|---|
| Criteria A | The apparatus shall continue to operate as intended during and after the test. No degradation of performance or loss of function is allowed below a performance level specified by the manufacturer, when the apparatus is used as intended. The performance level may be replaced by a permissible loss of performance. If the minimum performance level or the permissible performance loss is not specified by the manufacturer, either of these may be derived from the product description and documentation, and from what the user may reasonably expect from the apparatus if used as intended. |
| Criteria B | The apparatus shall continue to operate as intended after the test. No degradation of performance or loss of function is allowed below a performance level specified by the manufacturer, when the apparatus is used as intended. The performance level may be replaced by a permissible loss of performance. During the test, degradation of performance is however allowed. No change of actual operating state or stored data is allowed. If the minimum performance level or the permissible performance loss is not specified by the manufacturer, either of these may be derived from the product description and documentation, and from what the user may reasonably expect from the apparatus if used as intended. |
| Criteria C | Temporary loss of function is allowed, provided the function is selfrecoverable or can be restored by the operation of the controls. |

5.3 Electrostatic Discharge Immunity Test

5.3.1 Test Specification

| | |
|----------------------------|---|
| Standard | EN 61000-4-2 |
| Discharge Impedance | 330 ohm / 150 pF |
| Discharge Voltage | Air Discharge: ± 2 kV, ± 4 kV, ± 8 kV (Direct) Contact Discharge: ± 6 kV (Direct/Indirect) |
| Number of Discharge | Air: Minimum 10 times at each polarity Contact: Minimum 10 times at each polarity |
| Discharge Mode | Single Discharge |
| Discharge Period | 1 second minimum |

5.3.2 Test Instrument

| Item | Equipment | Manufacturer | Model | Meter No. | Calibration Date |
|------|----------------------------|--------------|-----------|-----------|------------------|
| 1 | ESD Generator | TESEQ | NSG 437 | CT-1-140 | Jun. 15, 2024 |
| 2 | ESD Generator | NoiseKen | ESS-B3011 | CT-1-089 | Jul. 23, 2024 |
| 3 | Digital Thermo-Hygro Meter | N/A | HTC-8 | CT-2-047 | Jun. 06, 2023 |
| 4 | Atmosphere pressure meter | TES | TES-1161 | CT-5-094 | Aug. 10, 2023 |

- Note:** 1. The calibration interval of the test instruments is 12 months.
2. The calibration interval of thermo hygrometer/ Atmosphere pressure meter is 24 months.

5.3.3 Test Procedure

The test procedure was in accordance with IEC 61000-4-2.

The test generator necessary to perform direct and indirect application of discharge to the equipment under test in following methods:

a. Contact discharges to the conductive surface and coupling planes:

For table-top equipment under test one of the test points shall be the centre front edge of the horizontal coupling plane, which shall be subjected to at least 20 indirect discharges (10 of each polarity).

All other test points shall each receive at least 20 direct contact discharges (10 of each polarity).

All surfaces normally touched by the user should be tested. Test shall be performed at a maximum repetition rate of one discharge per second.

Vertical Coupling Plane (VCP):

The coupling plane, of dimensions 0.5 m × 0.5 m, is placed parallel to, and positioned at a distance 0.1 m from the equipment under test, with the discharge electrode touching the coupling plane. The four faces of the equipment under test will be performed with electrostatic discharge.

Horizontal Coupling Plane (HCP):

The coupling plane, of dimensions 1.6 m × 0.8 m, is placed under the equipment under test. The generator shall be positioned vertically a distance of 0.1 m from the equipment under test, with the discharge electrode touching the coupling plane. The four faces of the equipment under test will be performed with electrostatic discharge.

b. Air discharge at apertures and slots and insulating surface:

On those surfaces of the equipment under test where it is not possible to perform contact discharge testing, the equipment should be investigated to identify user accessible points where breakdown may occur. Such points are tested using the air discharge method. This investigation should be restricted to those area normally handled by the user. A minimum 20 single air discharges (10 of each polarity) shall be applied to the selected test point for each such area.

| 9 | Measurement Software | EMC-RS | Ver: 2.0.1.3 | N/A | No calibration request |

Note: 1. The calibration interval of the above test instruments is 12 months.

5.4.3 Test Procedure

The test procedure was in accordance with IEC 61000-4-3.

- a. The table-top equipment under test and load, which are placed on a table that is 0.8 meter above ground, are placed with one coincident with the Uniform Field Area (UFA) such that the distance from antenna to the EUT was 2.15 meter at test frequency 80M ~ 1GHz & 1 meter at test frequency 1G ~ 6GHz. Both horizontal and vertical polarization of the antenna and four sides of the equipment under test are set on measurement. All cables shall be connected to the equipment under test and arranged on the test site in accordance with the installation instructions and shall replicate typical installations and use as much as possible.
- b. The specified wiring types and connectors shall be used. If the wiring to and from the equipment under test is not specified, unshielded parallel conductors shall be used. If the product specification require a wiring length of less than or equal to 1 m, then the specified length shall be used. If the length specified is greater than 1 m, or is not specified, then the length of cable used shall be chosen in accordance with typical installation practices. Unless otherwise specified above, a minimum of 1 m of cable shall be exposed to the electromagnetic field in one orientation, either vertical or horizontal.
- c. Each cable does not need to be exposed to the field during the exposure of each face of the equipment under test. But each cable shall, at least during one of the equipment under test orientations, be positioned within the Uniform Field Area (UFA), and thus exposed to the field.
- d. If a product committee determines excess cable length needs to be decoupled (for cables leaving the test area), then the decoupling method used shall not impair the operation of the equipment under test. If cable decoupling is performed, CMADs may be used. The CMAD shall always be placed flat on the floor. Each cable to be decoupled should be treated with a separate CMAD.
- e. If the equipment under test is too large such that it cannot be fully illuminated by the radiating antenna, or exceeds the size of the Uniform Field Area (UFA) then partial illumination shall be used. The equipment under test can be repositioned so that the front surface remains within the Uniform Field Area (UFA) in order to illuminate those sections of the equipment under test that were previously outside the Uniform Field Area (UFA).
- f. The frequency range shall be swept, with the signal 80% amplitude modulated with a 1kHz sine wave. If multiple test signals were used during testing, care should be taken to ensure that any recorded performance degradation was caused by a single test signal and was not caused by the combination of multiple test signals.

5.5 Electrical Fast Transient /Burst Immunity Test

5.5.1 Test Specification

| | |
|--------------------------|---|
| Standard | EN 61000-4-4 |
| Test Voltage | Power Port: ± 2 kV Signal / Control Port (cable length > 3m): ± 2 kV |
| Polarity | Positive & Negative |
| Impulse Frequency | 5 kHz |
| Impulse Wave | 5/50 ns |
| Burst Duration | 15 ms |
| Burst Period | 300 ms |
| Test Duration | Not less than 1 min. |

5.5.2 Test Instrument

| Item | Equipment | Manufacturer | Model | Meter No. | Calibration Date |
|------|---------------|--------------|---------|-----------|------------------|
| 1 | EFT Generator | 3ctest | EFT500S | CT-1-165 | Sep. 27, 2024 |
| 2 | Clamp | 3ctest | CCC100 | CT-1-166 | Sep. 27, 2024 |

Note: 1. The calibration interval of the above test instruments is 12 months.

5.5.3 Test Procedure

The test procedure was in accordance with IEC 61000-4-4.

- a. The table-top equipment under test was placed on a table that is 0.8 meter height. A ground reference plane is placed on the table, and uses 0.1 m insulation between the equipment under test and ground reference plane. The floor-standing equipment under test was placed on 0.1 m insulation support unit between the equipment under test and ground reference plane.
- b. The minimum area of the ground reference plane is 1 m × 1 m, and 0.65 mm thick min, and projected beyond the equipment under test by at least 0.1 m on all sides. The equipment under test shall be arranged and connected to satisfy its functional requirements, according to the equipment installation specifications.

For input power ports:

The equipment under test is connected to the power ports through a coupling device that directly couples the EFT/B interference signal. Each of the line conductors is impressed with burst noise for 1 minute. The distance between the coupling device and the table-top equipment under test is 0.5 m.

For signal / data ports:

The capacitive coupling clamp shall be used for the application of the test voltages. The test voltages shall be coupled to all of the equipment under test ports in turn including those between two units of equipment involved in the test, unless the length of the interconnecting cable makes it impossible to test.

5.6 Surge Immunity Test

5.6.1 Test Specification

| | |
|------------------------------|---|
| Standard | EN 61000-4-5 |
| Wave- Shape | Combination Wave 1.2/50 μ s Open Circuit Voltage, 8/20 μ s Short Circuit Current |
| Test Voltage | Power Port - Line to Line: ± 1 kV, 42 Ω , 0.5 μ F Line to Ground: ± 2 kV, 42 Ω , 0.5 μ F |
| Polarity | Positive/Negative |
| Phase Angle | 0°/90°/180°/270° (For AC Main Power Port) |
| Pulse Repetition Rate | 1 time / min. (maximum) |
| Times | 5 Positive and 5 Negative at selected points |

5.6.2 Test Instrument

| Item | Equipment | Manufacturer | Model | Meter No. | Calibration Date |
|-------------|------------------|---------------------|--------------|------------------|-------------------------|
| 1 | Surge Generator | HAEFELY | AXOS8 | CT-1-059(1) | Aug. 12, 2024 |
| 2 | Surge CDN | 3cTest | CDN-405T8A1 | CT-1-074(5) | May 27, 2024 |

Note: 1. The calibration interval of the above test instruments is 12 months.

5.6.3 Test Procedure

The test procedure was in accordance with IEC 61000-4-5.

- a. The table-top equipment under test was placed on a table that is 0.8 meter height. A ground reference plane is placed on the table, and uses 0.1m insulation between the equipment under test and ground reference plane.
- b. If not otherwise specified the power cord between the EUT and the coupling network shall not exceed 2 m in length.

For input power ports:

The table-top equipment under test was connected to the power ports through a coupling device that directly couples the surge interference signal. The surge noise shall be applied synchronized to the peak value of the voltage wave (Positive and negative). Each of Line to Earth and Line to Line is impressed with a sequence of five surge voltages with interval of 1 minute.

For signal / data ports:

The table-top equipment under test was connected to the signal ports of associated equipment through a Coupling / De-coupling Network (CDN). The surge noise shall be applied synchronized to the peak value of the voltage wave (Positive and negative). Each of Line to Earth is impressed with a sequence of five surge voltages with interval of 1 minute.

For shielded lines:

The table-top equipment under test is isolated from ground and the surge is applied to its metallic enclosure; the termination (or auxiliary equipment) at the port under test is grounded. The length of the cable between the port under test and the device attached to the other end of the cable shall be 20 m (preferred length) or, the shortest length over 10 m, where the manufacturer provides pre-assembled cables used in actual installations. For EUTs which do not have metallic enclosures, the surge is applied directly to the shielded cable at the EUT side.

No test shall be required for cables which according to the manufacturer's specification are ≤ 10 m.

| 8 | Measurement Software | HUBERT | Ver: 1.1.2 | N/A | No calibration request |

Note: 1. The calibration interval of the above test instruments is 12 months.

5.7.3 Test Procedure

The test procedure was in accordance with IEC 61000-4-6.

- a. The table-top equipment under test was placed on an insulating support of 0.1 m height above a reference ground plane. If the equipment is designed to be mounted in a panel, rack or cabinet, then it shall be tested in this configuration. Grounding of the equipment shall be consistent with the EUT's installation instructions. The Coupling/De-coupling Network (CDN) shall be located between 0.1 m and 0.3 m from the equipment under test.
- b. The frequency range shall be swept, using the signal level established during the setting process and with a disturbance signal of 80 % amplitude. The signal is modulated with a 1 kHz sine wave, pausing to adjust the RF signal level or the switch coupling devices as necessary. Where the frequency is swept incrementally, the step size shall not exceed 1 % of the preceding frequency value.

For input power ports:

The table-top equipment under test was connected to the power ports through a Coupling/De-coupling Network (CDN) for power supply lines. And directly couples the disturbances signal into equipment under test.

For signal / data ports:

The table-top equipment under test was connected to the signal ports of associated equipment through a Coupling/De-coupling Network (CDN). And directly couples the disturbances signal into equipment under test.

5.7.4 Deviation from Standard

No deviation

5.7.5 Test Configuration

Note:

1. The EUT clearance from any metallic objects other than test equipment shall be at least 0,5 m.
2. Only one of the CDNs not used for injection shall be terminated with 50 Ω, providing only a single return path. All other CDNs shall be configured as decoupling networks.
